

Genco were commissioned to carry out a floor replacement at a Waitrose Retail Store in Ipswich, Suffolk.

The brief was to replace the damaged Amtico sales floor and tank concrete sub-floor and to add two new gravity/pump feed drainage systems to the wall lined cases.

To enable these works, a full de-merchandising was required. This included the removal of twelve integral chilled and frozen cases and all the shelving mods.

The project was completed over a two week program and delivered on budget.
